

Typescript

Open Source, object oriented, typed superset of Javascript created by Microsoft

- Contain all functionality of JS
- OOP additions such as classes, interfaces, inheritance, modules...
- Supports static type checking

Essentially a more strict JS

Typescript is not readable by the browser

You must transpile it into JS before running in the browser/nodejs

To install run `npm install -g typescript` in a terminal

To transpile you run the `tsc` command
